

Organ, Eye & Tissue Donation

HOW ORGAN DONATION WORKS

Patient admitted to the hospital

1

Medical team provides care in an attempt to save the patient's life

Non-survivable injuries

2

Patients family begins end of life planning

LifeSource is contacted

3

Hospital contacts LifeSource about potential for organ, eye and tissue donation

LifeSource meets with family

4

LifeSource talks with the donor's family to discuss the donation process

Donation is authorized

5

If the person did not register as a donor during their lifetime, their next of kin is asked to make a decision on their behalf

Medical evaluation & matching

6

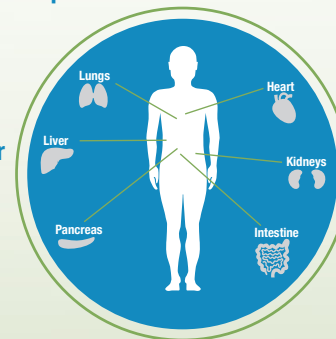

Detailed medical tests are performed to determine the best potential match for each organ

Recovery of organs

7

Organs are recovered and transported for life-saving transplants

Transplants performed and lives are saved

8

Donor family care

9

The donor's family receives care from LifeSource for as long as they would like.
