

Organ, Eye & Tissue Donation

HOW TISSUE PROCESS WORKS

Referral and Assessment

1

Hospital contacts LifeSource about potential for organ, eye and tissue donation. Remote EMR access streamlines process.

Family Conversation

2

LifeSource team talks with family about donation opportunities by phone or in person. on shared organ/tissue cases

Management and Evaluation

3

Review medical/social history, conduct infectious disease testing, and coordinate with Medical Examiner and Funeral Director

Placement

4

Match donors with tissue processing partners based on medical criteria to maximize the donor's gifts.

Recovery and Transport

5

Tissue and eyes are recovered by LifeSource team members and sent to processing partners.

Aftercare Program

6

Donor family follow-up and on-going, individualized care.
